

A golden age of remote sensing: possibilities and pitfalls for agricultural systems research

David Lobell
Stanford University
Center on Food Security and the Environment (FSE)
dlobell@stanford.edu
Sept. 28, 2016

With inputs from George Azzari, Marshall Burke, Meha Jain, and others

A Golden Age for smallholder remote sensing...

Hand, *Science News*, 2015

Some New Datasets

Sensor	Wavelengths	Spatial Resolution	Revisit frequency	Launch year
Sentinel-1	C-band radar	20m	6 day	2014
Sentinel-2	Optical	10m	5 day	2015
Terra Bella (Skysat)	Optical	1m	~weekly	2013
Planet (Planetscope)	Optical	5m	~daily	2014

A Golden Age for smallholder remote sensing...

- Morogoro, Tanzania

LANDSAT 8 SR - 30m

Sentinel-2 MSI - 10m

RapidEye - 5m

PlanetScope - 3m

Terra Bella SkySat - 2m

Skysat
imagery:
Webuye,
Kenya

Mar 11, 2015

Possibilities

- New algorithms allow one to rapidly translate raw imagery into insights about the agricultural systems
 - Crop types
 - Yields
 - Sow dates
 - Tillage practices
 - etc.

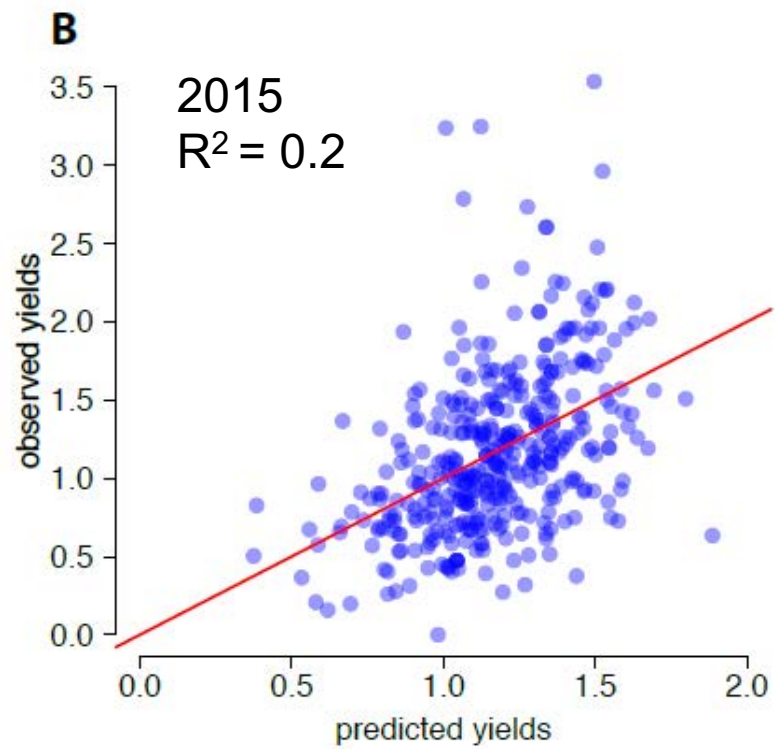

Possibilities

Crop Cut Yield

Google

Possibilities

With much greater speed and lower cost, we could:

- 1) Evaluate impacts of ongoing and past interventions
- 2) Develop hypotheses for new interventions (via analysis of data on yields and production factors)
- 3) Target interventions to the most responsive fields/farmers

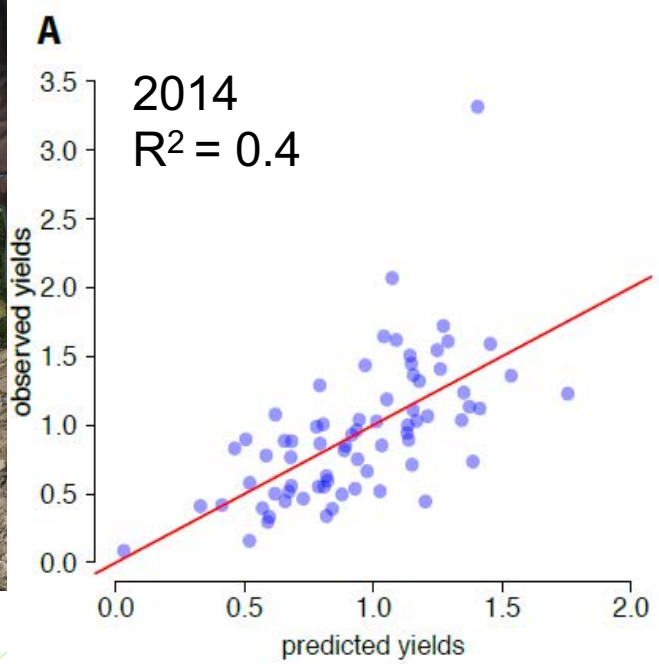

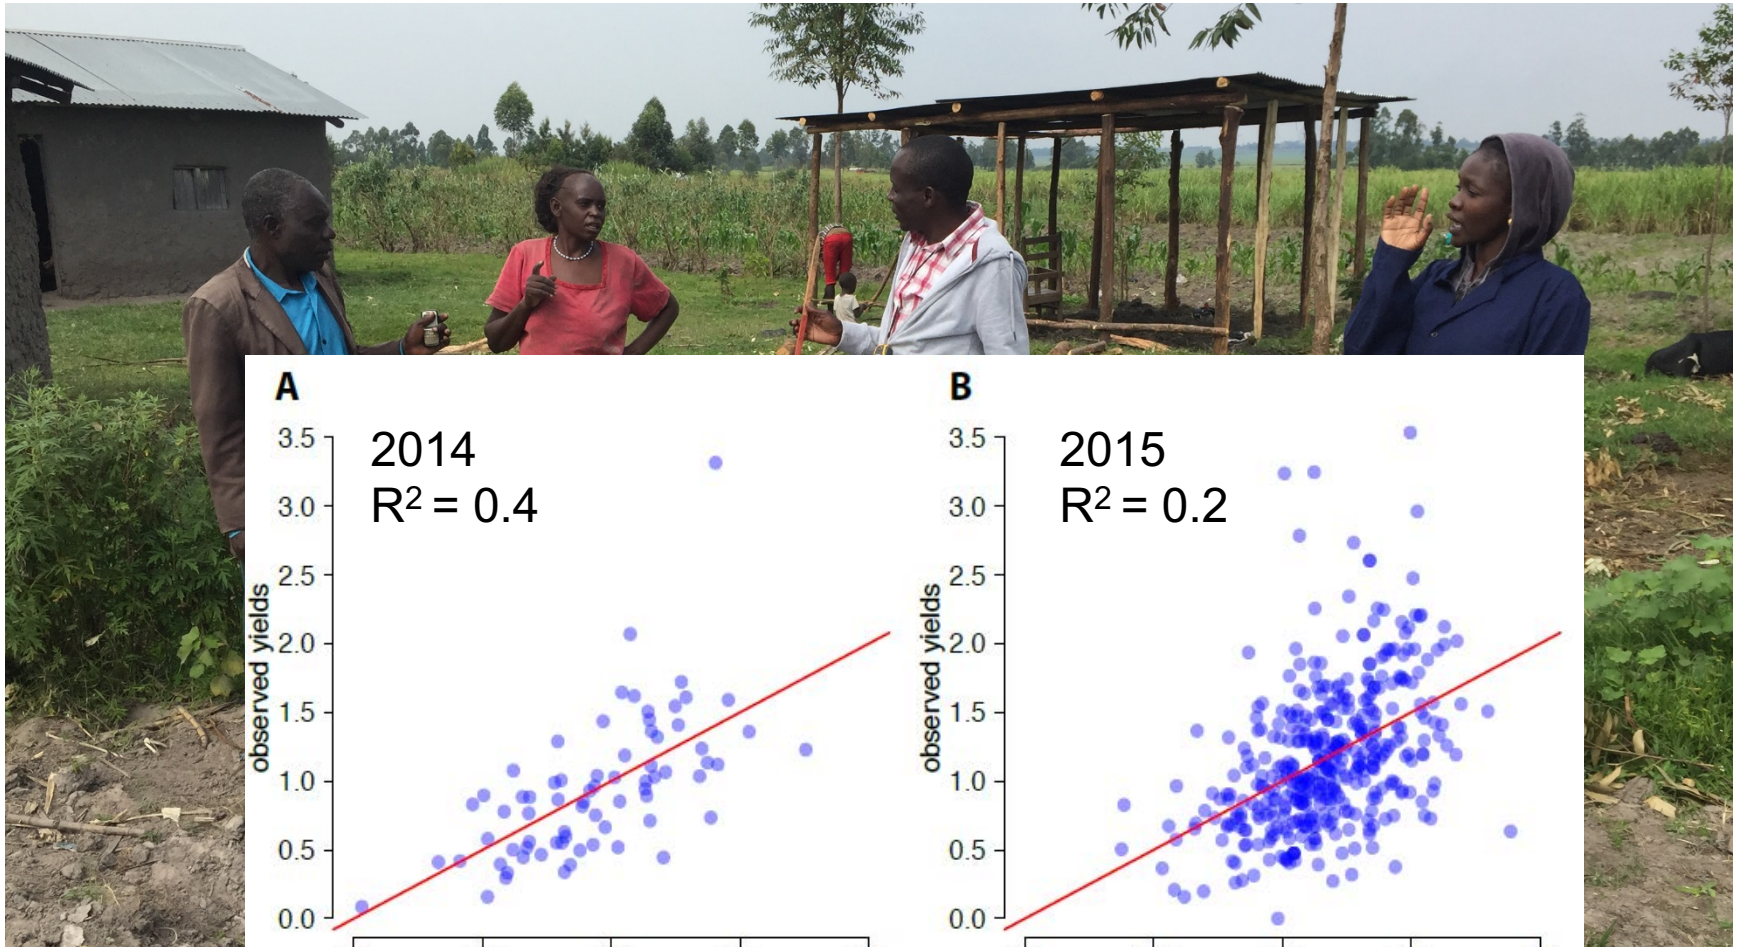

Pitfalls

Pitfalls

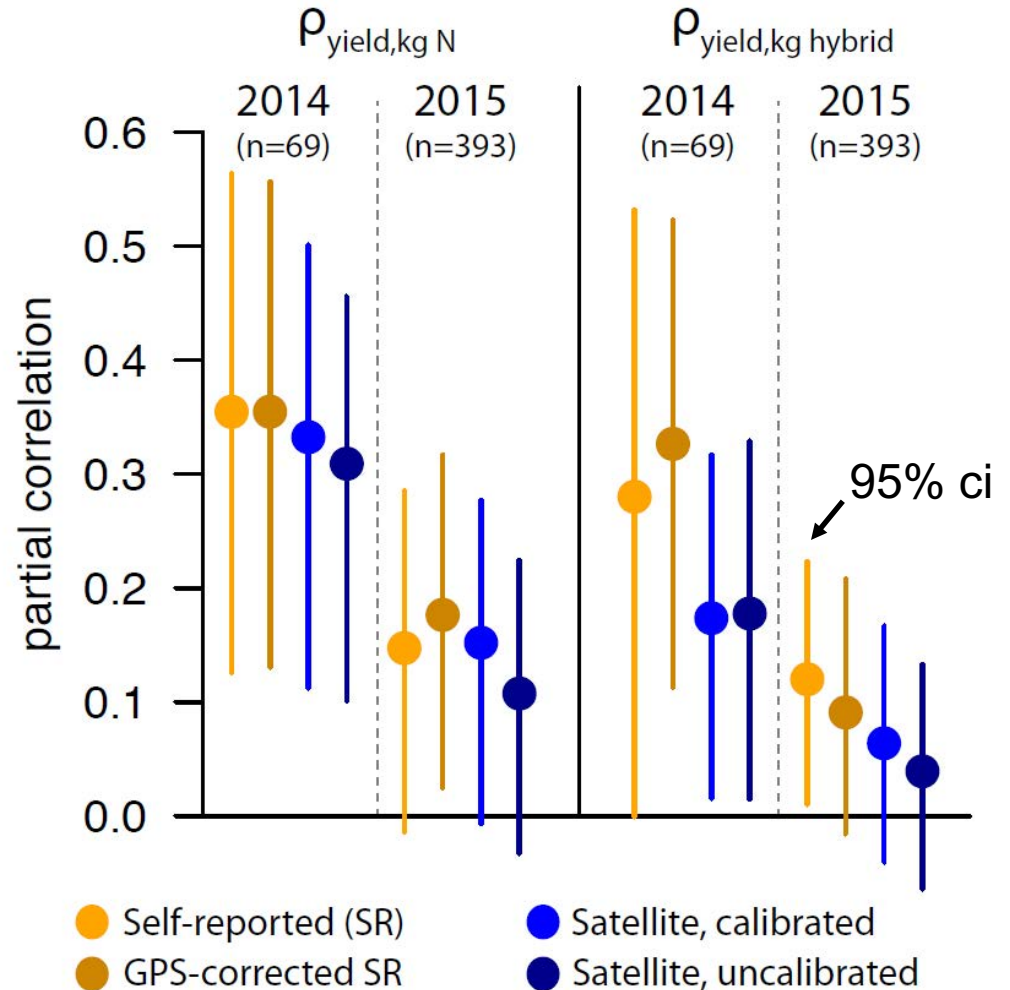

- Demanding too much in terms of “proven accuracy”
 - Because even a lot of “so-so” data can be very powerful
 - Because ground data aren’t always great

Similar conclusions from cheaper data

Relationships between inputs and maize yields in Western Kenya for two years (Burke and Lobell, in review)

Summary

- Satellite approaches are finally poised to fulfill their promise
- Three ways this could help CIMMYT (and others) is for evaluating impact, generating hypotheses, and targeting
- We are excited to partner with others on each of these, or other ideas you might have...

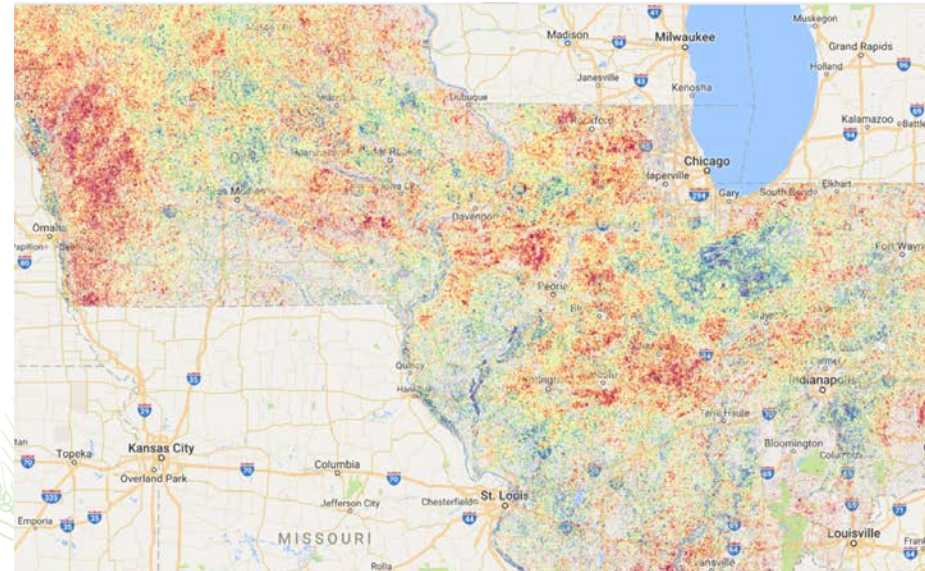

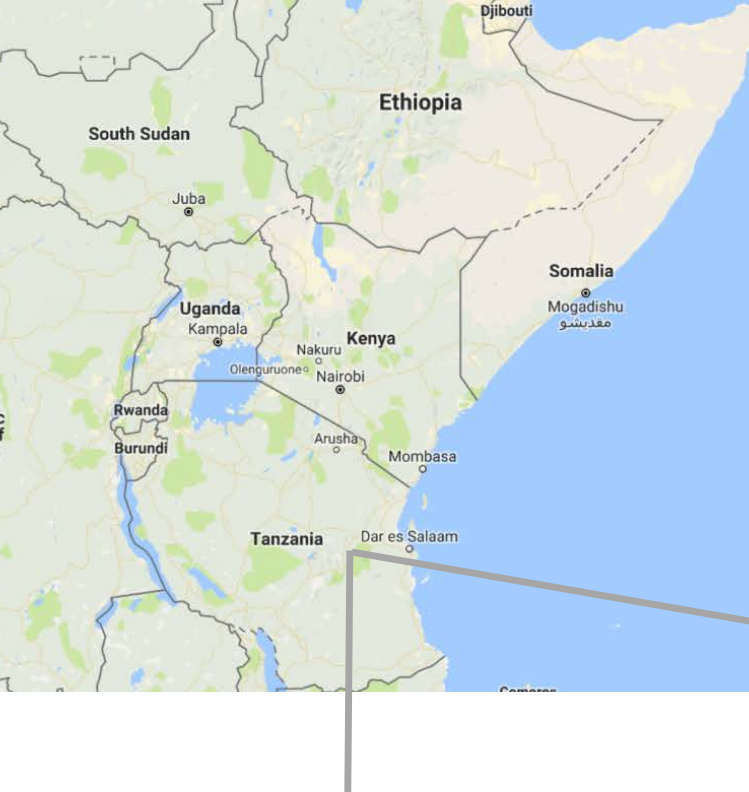

Imagine the questions you could answer...

US Average maize yields, 2000-2015

Trend maize yields, 2000-2015
